Chapter Title and relief sought	Appellant Court Number	Consequentially Provisions	Affected
Amend Chapter title: Landscapes and Rural <u>Environment</u> Character	Real Journeys Limited ENV-2018-CHC-131 (Environment Court decision issued)		

Note: the annotations in this chapter reflect the Council's interpretation of the provisions affected by appeals.

6.1 Purpose

The purpose of this Chapter is to provide greater detail as to how the landscape, particularly outside urban settlements, will be managed in order to implement the Strategic Objectives and Policies in Chapter 3. This chapter needs to be read with particular reference to the Chapter 3 Strategic Objectives and Policies, which identify the outcomes the policies in this Chapter are seeking to achieve. The relevant Chapter 3 Strategic Objectives and Policies are identified in brackets following each policy.

Landscapes have been categorised to provide greater certainty of their importance to the District, and to respond to regional policy and national legislation. Categorisations of landscapes will provide decision makers with a basis to consider the appropriateness of activities that have adverse effects on those landscapes.

6.1.1 Application of this Chapter

Chapter 1 (Introduction) provides an explanation of the structure of the District Plan including the application of the strategic chapters of the District Plan applying across the Queenstown Lakes District, and the two-volume approach consisting of Volume A and Volume B.

Chapter 3 provides overarching strategic direction for the Queenstown Lakes District. The Chapter 3 Strategic Objectives and Policies are further elaborated on in Chapter 6, which provides more detailed policies for landscapes and rural character. Chapter 6 applies district wide over Volume A and Volume B land, with the application of location specific policies as set out in the chapter. The principal role of Chapters 3 to 6 collectively is to provide direction for the more detailed provisions related to zones and specific topics contained elsewhere in the District Plan.

6.2 Values

The District's landscapes are of significant value to the people who live in, work in or visit the District. The District relies in a large part for its social and economic wellbeing on the quality of the landscape, open spaces and the natural and built environment. Those landscapes also have inherent values, particularly to Tangata Whenua.

LANDSCAPES & RURAL CHARACTER 6

The landscapes consist of a variety of landforms created by uplift and glaciations, which include mountains, ice-sculpted rock, scree slopes, moraine, fans, a variety of confined and braided river systems, valley floors and lake basins. These distinct landforms remain easily legible and strong features of the present landscape.

Indigenous vegetation also contributes to the quality of the District’s landscapes. While much of the original vegetation has been modified, the colour and texture of indigenous vegetation within these landforms contribute to the distinctive identity of the District’s landscapes.

The open space or open character of rural land are key elements of the landscape character that can be vulnerable to degradation from subdivision, development and non-farming activities. The prevalence of large farms and landholdings contributes to the open space and rural working character of the landscape. The predominance of open space over housing and related domestic elements is a strong determinant of the character of the District’s rural landscapes.

Some rural areas, particularly those closer to the Queenstown and Wānaka urban areas and within parts of the Wakatipu Basin and Upper Clutha Basin, have an established pattern of housing on smaller landholdings. The landscape character of these areas has been modified by vehicle accesses, earthworks and vegetation planting for amenity, screening and shelter, which have reduced the open space exhibited by larger scale farming activities.

While acknowledging these rural areas have established rural living and development, and a substantial amount of further subdivision and development has already been approved in these areas, the landscape values of these areas are vulnerable to degradation from further subdivision and development. Areas where rural living development is at or is approaching the finite capacity of the landscape need to be identified if the District’s distinctive rural landscape values are to be sustained. Areas where the landscape can accommodate sensitive and sympathetic rural living developments similarly need to be identified.

The lakes and rivers both on their own and, when viewed as part of the distinctive landscape, are a significant element of the national and international identity of the District and provide for a wide range of amenity and recreational opportunities. They are nationally and internationally recognised as part of the reason for the District’s importance as a visitor destination, as well as one of the reasons for residents to belong to the area. Managing the landscape and recreational values on the surface of lakes and rivers is an important District Plan function.

Private, commercial and public operators rely on the use, occupation of and access to lakes and rivers for a wide range of activities including recreation, commercial recreation, tourism, transport services and infrastructure. These activities could also include both temporary and permanent structures on the surface, and on the margins, of lakes and rivers.

Activities on the surface of lakes and rivers and their supporting infrastructure can have adverse effects on nature conservation values, landscape values, and navigational and congestion safety (including on other commercial operators and recreational users). New activities also have the potential to adversely affect established activities for example by detracting from the experience enjoyed by the users of existing activities and generating adverse safety effects.
