

WE ALL HAVE A PART TO PLAY

Keep rubbish and recycling areas clean and tidy. Keep lids closed for all storage containers and skips to prevent oil and other contaminants leaking out

Ensure hazardous substances (e.g. used car oil and radiator fluid) meet HSNO requirements for storage, are regularly maintained, and certified

Use a broom to sweep up rubbish

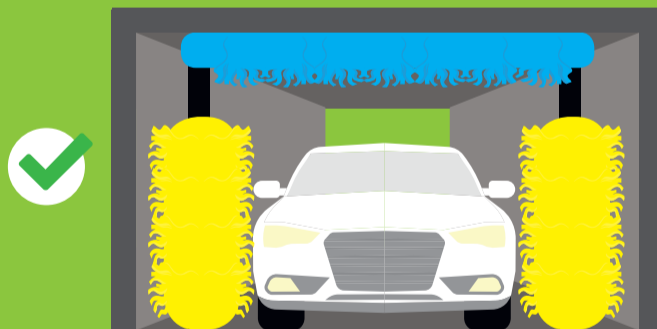

Clean up spills straight away
(Use the appropriate spill kit for cleaning up waste oil)

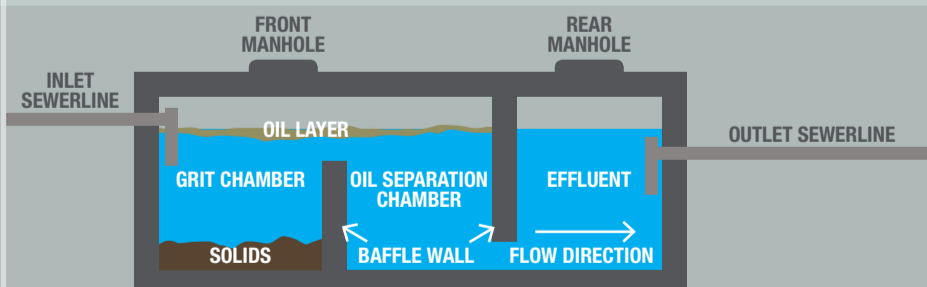

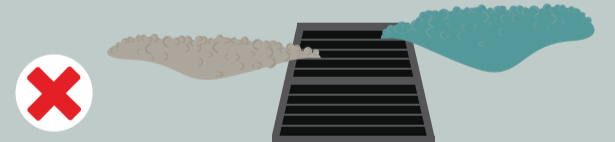

Use environmentally preferable cleaning products that will have the least effect on the environment

Ensure large wash pads are roofed
(Otherwise, a first flush system must be installed)

Use and maintain interceptors on any outdoor drains to catch oils and hydrocarbons

Help keep our lakes, rivers and environment clean
