

APPENDIX 4

**THE BAXTER DESIGN GROUP LANDSCAPE ASSESSMENT ADDENDUM AND
ACCOMPANYING GRAPHIC ATTACHMENT, BDG
DATED DECEMBER 2016**

Landscape Assessment Addendum

Dalgleish Farm – Millbrook

November 2016

INTRODUCTION

1. This landscape assessment addendum responds to changes proposed by Millbrook Country Club Ltd (“Millbrook”) in response to submissions made to the Millbrook Resort Zone of the Proposed Queenstown Lakes District Plan (PDP). This report assesses the landscape effects of the proposed amendments.
2. The following are attached for reference:
 - **Attachment A – Structure Plan Zone Changes**
 - **Attachment B – Structure Plan**
 - **Attachment C – Structure Plan – South Dalgleish Area**
 - **Attachment E – Viewpoint 1**
 - **Attachment F – Viewpoint 2**
 - **Attachment G – Viewpoints 3 & 4**

BACKGROUND

3. Millbrook seeks to extend the Millbrook Resort Zone into Dalgleish Farm. This proposal has been notified as part of the PDP process. Since the notification of the proposal, Millbrook has reflected on particular submissions received and has suggested the following changes to the proposal (**Attachment A**):
 - Portions of the Residential Activity Areas (R) have been amended. These amendments have generally removed residential activity from the more southerly portions of the site and relocated them to the more central parts of the site.
 - A part of the Landscape Protection (LP) Activity Area has been removed to allow for additional Golf Course and Open Space (G) Activity Areas.
 - The Ecological Protection and Restoration Overlay has been removed and a Gully Planting (GP) and Open Planting (OP) overlay is proposed.

- Earthworks Overlays (E1 and E2) are proposed to indicate where earthworks will be undertaken to mitigate against effects of development on neighboring properties.
 - Specific height controls have been added for “indicative residential sites” in much of the more elevated R14, R15 and R16 areas to provide more certainty as to built form outcomes.
 - A recession plane rule has been added and RL’s have been set for the more northerly lots to reduce the public visibility of future buildings in the R16 Activity Area.
 - A setback rule has been added to the R15 area and additional planting is proposed to the north to reduce the public visibility of future buildings in this Activity Area.
4. As part of this proposal, Millbrook seeks to amend the existing Structure Plan to reflect its recently consented stage 3D development which has been consented since notification of the PDP (**Attachment B**).
 5. The combined changes have resulted in an overall reduction in Residential Activity Areas by 1.88ha.
 6. Overall this proposal seeks to establish a resort area characterised by large amounts of open space in proportion to built form. For a full description of the changes to the proposal please refer to the amended chapter 43 Millbrook Resort Zone and the proposed South Dalgleish Structure Plan (**Attachment C**).

LANDSCAPE AND VISUAL ASSESSMENT

OVERVIEW

7. A full and detailed evaluation accompanied the original proposal as notified. This original evaluation assessed the receiving landscape under the Amended Pigeon Bay Criteria. The subject site has also been part of other documents adopted by Council including The *Wharehuanui Landscape Study* and The *Wakatipu Basin Residential Subdivision and Development: Landscape Character Assessment*.
8. Overall it is widely recognised that the subject site is not part of an Outstanding Natural Landscape or Feature and has the ability to absorb some appropriate development.
9. The Proposed District Plan (PDP) provisions describe the purpose for the Millbrook Resort Zone as follows:

The purpose of the Millbrook Resort Zone is to provide for a visitor resort of high quality. The Zone provides for recreational activities (including golf), commercial, residential and visitor accommodation together with support facilities and services. The general amenity of the Zone is one of development enclaves located in the open rural countryside with well landscaped grounds. Well located and designed development is expected throughout the Zone. To achieve this, integrated planning in accordance with a Structure Plan is required.

10. The following portion of this report considers the effects of the suggested changes to the zone proposal on the landscape and visual amenity. This report is intended to be read in conjunction with the 2015 assessment that accompanied the original proposal and provides additional comment to the original report, specifically addressing the effects of the proposed changes. It assess the proposal in the frame of the PDP's Objectives, Policies and Assessment Matters contained in Chapter 3 – *Strategic Direction*, Chapter 5, *Strategic Direction, Landscape* and Chapter 13 – *Rural Zone, 13.6 Assessment Matters*.

VISIBILITY

11. The full assessment which accompanied the notified review identified several areas where the proposal will be visible and the level of effects of the proposal's visibility from those locations. The public locations where the proposal would have been visible to some degree include:
 - Malaghans Road,
 - Dennison Way (being the first 75m from Malaghans Road),
 - Feeley Hill,
 - Cotter Avenue,
 - North Lake Hayes Recreation Area Access,
 - Tobins Track,
 - The Crown Range Zig Zag,
 - Coronet Peak Ski Area and access road.
12. It is considered that the amendments to the proposal will marginally reduce the effects of the proposal's visibility as viewed from more distant places, especially from places to the east and south. It is considered that the effects of the revised proposal on the lower portion of Dennison Way will be very low to negligible as the existing vegetation and LP zone will provide a significant visual screen between this part of Dennison Way and the proposed development.
13. The following assessment concentrates on the effect of the proposal as viewed from **Malaghans Road** as it is considered this is public place where a change in effect is most likely.

Malaghans Road

14. Malaghans Road is considered to be the public place where the site is most often experienced. Much of the southern boundary of Malaghans Road is densely planted in mature exotic trees which screen views into Millbrook and Dagleish Farm. There are two places along Malaghans Road where the proposal can be viewed. They are from a short (approximately 500m) portion of road northwest of the subject site (**Attachments D & E**) and through a small gap in the vegetation near the site's northeastern boundary (**Attachment F, Viewpoint 3**).
15. The suggested amendments to the structure plan will bring proposed Residential Activity Areas on the upper plateau slightly farther north, closer to Malaghans Road. This has the potential to increase the presence of visible built form.
16. To mitigate the potential increase in visual effects of relocating the R Activity Area, a recession plane control and specific RL height limit rules have been added to the R16 Activity Area. Similarly

a setback rule and specific RL height limit rules have been added to the R15 Activity Area. Additional amenity planting is also proposed to the north of the R15 activity area.

17. No change has been proposed to the R Activity Areas on the lower slopes which are in closer proximity to Malaghans Road.
18. There is potential for future buildings on the upper plateau to break the line of the ridge as viewed from Malaghans Road. This potential existed with the notified plan but has slightly increased with the reorientation of the R15 area.
19. As the new proposal risked increasing the potential for future buildings to be visible on the ridgeline, additional mitigation and avoidance measures are proposed. There are new controls on the previously proposed R16 area which will provide increased assurance that building here will not be visually prominent. Buildings in the R15 area will be setback from the Activity Area's more visible boundary by 7m. Proposed planting on the northern edge of the R15 Activity Area will provide a level of screening and a vegetative context to visually absorb future buildings. These buildings are required to be recessively clad and coloured as part of the assessment criteria within the proposed zone provisions.
20. It is considered that new proposed controls on building height, location and proposed planting will reduce the visual effects of future buildings as viewed from Malaghans Road. Any breach in the ridgeline will be seen in the context of a dark grey backdrop provided by the distant slopes of the Remarkables. Amenity planting to the north of the R15 area will provide a level of screening and a vegetative context to allow a future, recessively clad and coloured building to be visually absorbed. Future buildings will be a considerable distance apart with landforms and vegetation breaking the form of the buildings and providing a foreground of views from Malaghans Road.
21. The more sensitive skyline and ridgeline to the west of the subject area will not be breached by built form.
22. Taking the above into account it is considered that the amended proposal will slightly increase the visibility of development as seen from a small window to the south of Malaghans Road. Additional mitigation controls have appropriately addressed this potential. It is considered that the amended proposal will have a very low change in effects on the visual amenity as experienced from Malaghans Road when compared to the notified version.

Private Places

23. Most of the proposed changes have been driven by responses to submitters toward the south of the Dagleish land and as such, potential effects on those properties are significantly reduced by the amended proposal.
24. It is understood that after a short distance along the formed portion of Dennison Way, the formed road does not follow the legal road and therefore the upper reaches cannot be easily reached without traversing private property. Accordingly, it is understood that the upper sections of Dennison Way have limited relevance in an assessment of public places. But, as acknowledged in the original landscape assessment there are some private properties from where development proposed will be visible in this area. It is therefore considered a relevant vantage point from which to assess any change in effects resulting from the new proposal.

25. From these more elevated portions of Dennison Way which are not accessible by vehicle via the legal road, much of the proposed development will be visible (**Attachment F, Viewpoint 4**). The amended proposal has brought development on the upper portions of the subject site closer to Dennison Way. However in the context of the other development that will be visible, the effects of the amended proposal are considered to be very low. While the amended proposal will locate residential development farther north towards Dennison Way, this will result in a negligible increase in the overall effects of the proposal on the upper part of Dennison Way and adjacent private properties.

STRATEGIC DIRECTION, LANDSCAPE

26. The proposal recognises the finite capacity of the landscape to absorb change. Development is concentrated in areas where the landscape can more readily accept change while retaining areas which may be adversely affected by change. While the amended proposal will locate development closer to Malaghans Road, resulting in at least some increased potential for buildings to be visible on the ridgeline, it leaves the more outstanding and natural portions of the site in their existing state and significantly reduces the overall Residential Activity Area.
27. The portions of the site and surrounding landscape which contribute to the visual amenity values will be largely unaffected by the changes to the proposal. It is considered that the more elevated portions of the site to the west of the development and the craggy face of the escarpments farther west (intended Landscape Protection Activity Areas) are the main contributors to the visual amenity. These high value areas will experience a negligible change in effect with respect to the proposed changes.
28. Overall it is considered that the proposed changes will have a very low adverse effect on the landscape character.

RURAL ZONE – 13.6 ASSESSMENT MATTERS (LANDSCAPE)

Landscape Character

29. The changes to the structure plan may result in a very low increase in effects on the rural character of the landscape as experienced from Malaghans Road. While buildings will be controlled in terms of their external appearance so that they appear sympathetic to the landscape's natural and rural character, the increase in visible built form will have a very low incremental adverse effect on the rural character as viewed from Malaghans Road relative to what was notified.
30. The internal, southern lands of the subject site will be more open as a result of this amended proposal. This will have the effect of increasing the site's rural character by increasing its degree of openness. This increase in openness however will not be widely perceived from public places.
31. It is considered that the rural character of the landscape will be maintained to a high degree. The scale and nature of the proposal will display an appropriate rural density of buildings within large areas of open space. The more open lands to the west and south will provide sufficient openness which will ensure the landscape's rural character is maintained to a high degree.

Visual Amenity

32. As stated above, the increase in visibility of built form will result a very small increase in the proposal's adverse visual effects. As covered in the landscape assessments in the notified proposal and the Wharehuanui Landscape Study, the visual amenity values of the site are in part derived from its location toward the edge of a landscape unit which has the potential to absorb such development. It is considered that the proposal is appropriately sited and controlled to ensure it has no more than a very low adverse effect on these visual amenity values.

Design and Density of Development

33. The amended proposal presents no additional new effects which are relevant to the design and density of development.

Cumulative Effects

34. The amended proposal will slightly increase the presence of domestic elements in the more rural landscape as experienced from Malaghans Road. However the amended proposal has reduced the overall Residential Activity Areas of the western part of the Resort Zone by 2.24ha from what was notified. This will reduce the potential for the proposal to contribute to adverse cumulative effects of development on the landscape.
35. It is considered that this increase in visual built form as experienced from Malaghans Road will not significantly alter the character or limit the appreciation of the landscape.
36. This amended proposal will not cross a threshold with respect to the landscape's ability to absorb further development. It is considered that the landscape is nearing that threshold but that there is capacity for additional, appropriate development to occur within discrete pockets of land.

Positive Effects

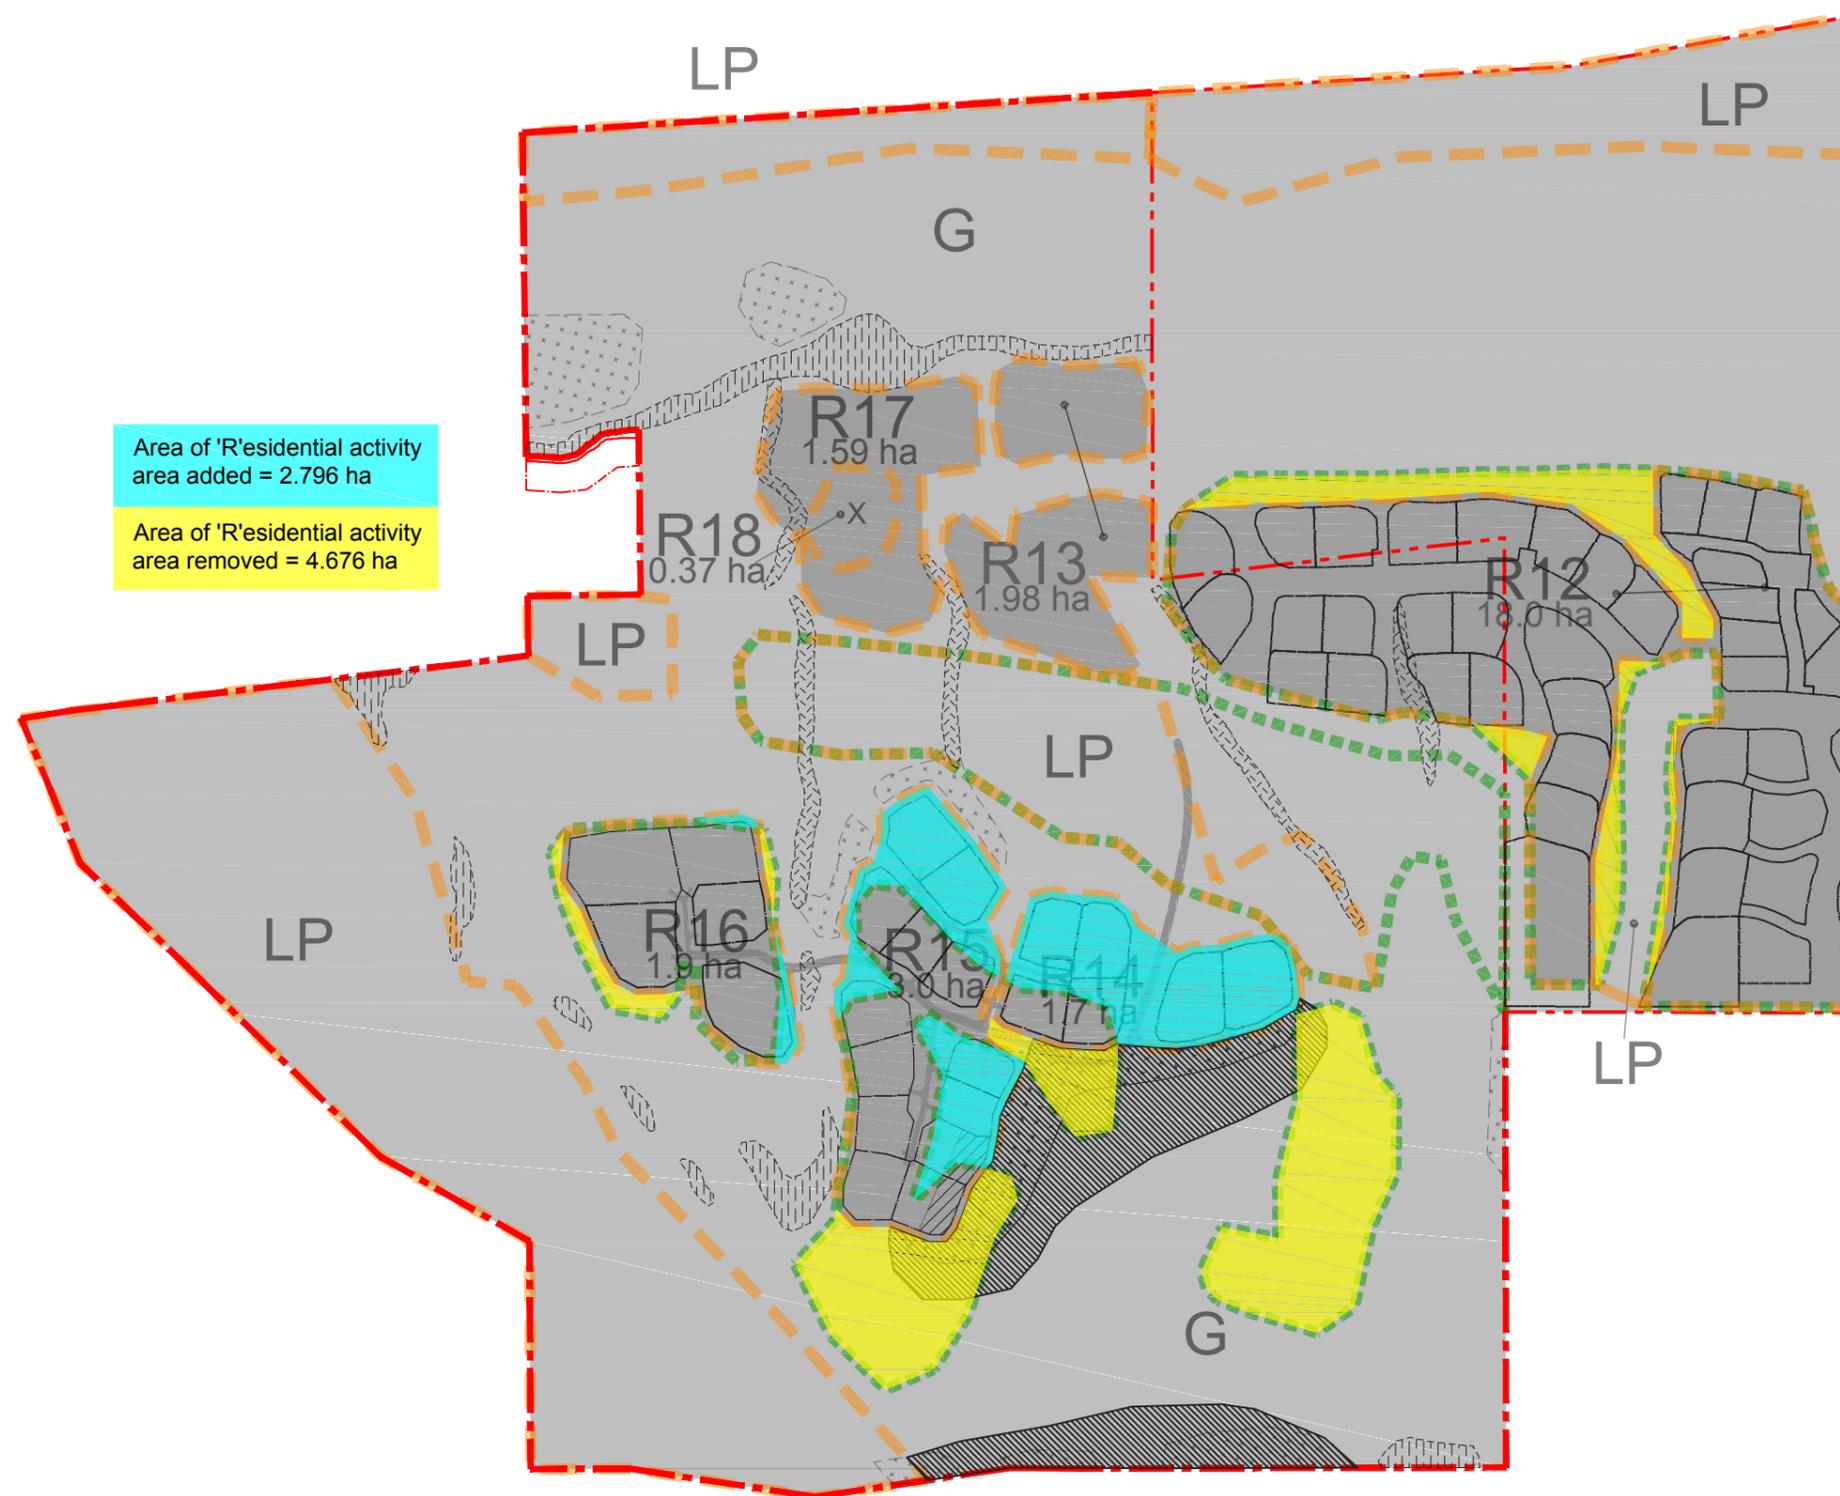

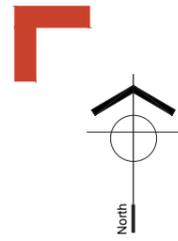

37. The amended proposal will increase the openness of the overall site, which will have a small positive effect in terms of rural character. Additional planting is also proposed which will have a very low increase in the positive effects of the proposal. The proposal does not significantly increase any other positive effects already provided for and discussed in the notified application.

CONCLUSION

38. The proposal seeks to amend the notified Millbrook Resort Zone to include revised provisions and a new structure plan. These changes are the result of a dialogue between submitters. The changes would shift development away from the site's more southern lands and locate it more towards the center of the site.
39. It is considered that these changes will slightly increase the proposal's adverse effects on visual amenity. There will be opportunities for an increase in ridgeline breaks as viewed from Malaghans Road. These views will be fleeting and visible from only a short portion of Malaghans Road. The amended structure plan and zone provisions introduce new mitigation measures to address the potential adverse effects of an increase in visual built form. It is considered that these controls and

measures will appropriately mitigate the potential for adverse visual effects and that the proposal will have a very low change in effect from what was notified.

40. Built development will slightly reduce the perceived openness of the landscape as viewed from the north. However, the overall openness has been increased as a result of these amendments. It is considered that the amendments to the proposal will increase the perceived adverse effects of the landscape's rural character to a very low degree, but will increase the overall rural character of the landscape by reducing the area of Residential Activity Areas which in turn will increase the landscape's openness.
41. Overall it is considered that the landscape has the ability to absorb the proposed development as the design will enhance the site's natural values and is located in a portion of land which can absorb such development. The amended proposal will have a very low change in effect on the landscape character and visual amenity from what was notified.

Area of 'R' residential activity area added = 2.796 ha

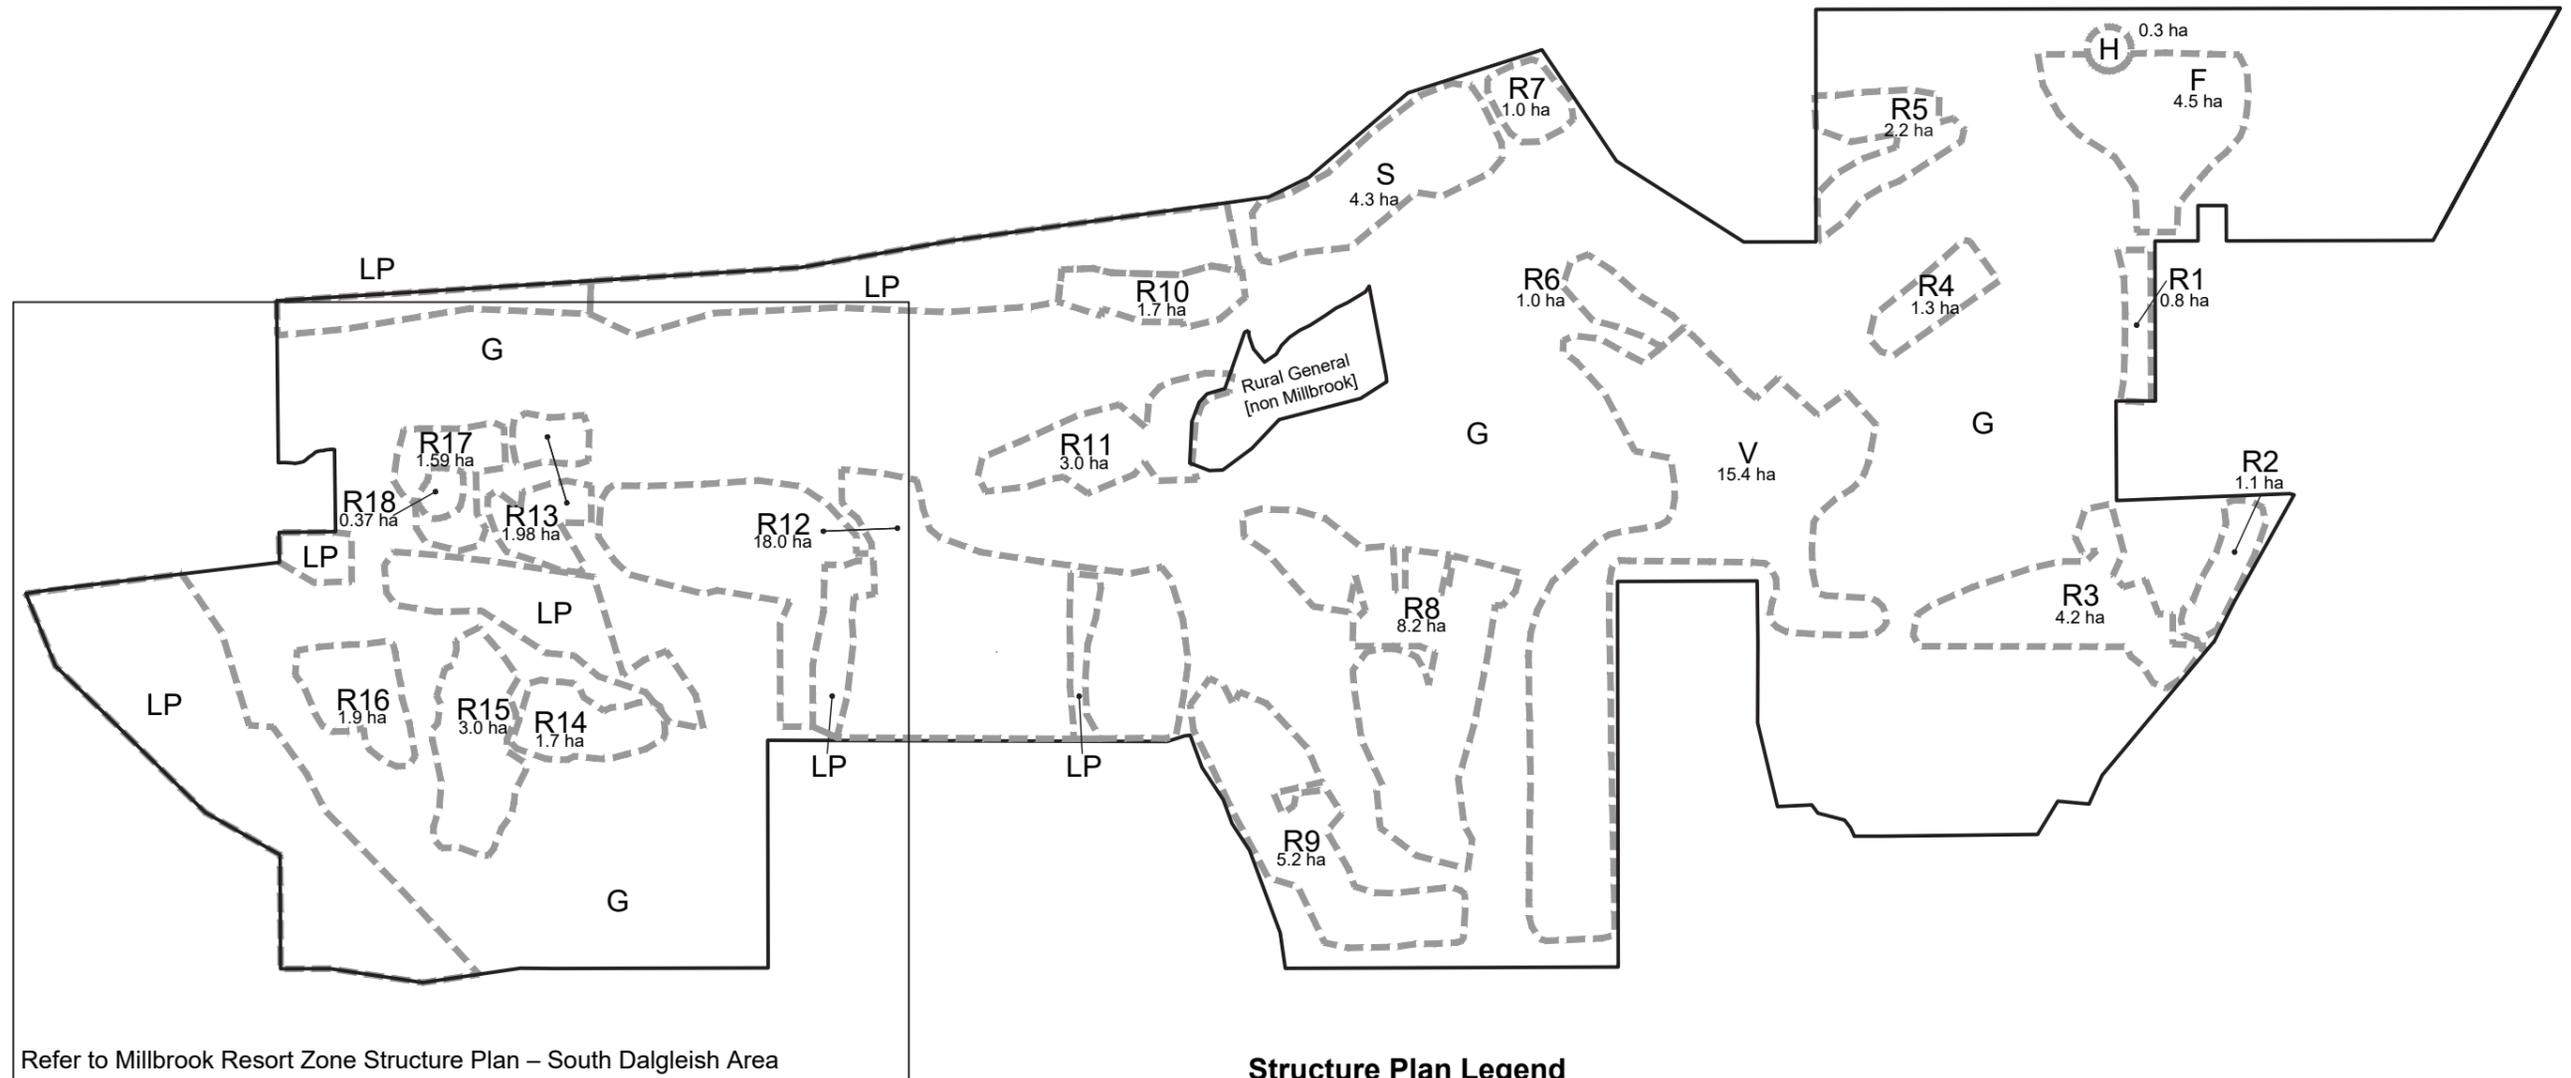

Area of 'R' residential activity area removed = 4.676 ha

introduction

1.1 Overview

Millbrook Resort was formally opened in 1992. The original site was developed to include the golf course, residential and hotel operations, and the central facilities. Demand for the Millbrook product has led to the planning and design of a new development on the land to the west of the existing Millbrook facilities.

This area has long been identified as suitable for development and is acknowledged in the Millbrook Structure Plan, included in the District Plan. Development in this area is anticipated in that plan and includes the ability to develop a further 9-holes of golf and integrated residential development.

This document sets out the design philosophy and design guidelines for Millbrook's new western development and in doing so seeks to preserve and enhance the character of Millbrook. The controls listed in this document are seen as important measures in protecting the amenity of Millbrook and the investment made by Millbrook Resort and by its Members.

Importantly, reference is also made to the relevant planning requirements. Purchasers should be aware of the need to comply with these in parallel with the guidelines outlined in this document. This includes the rules under the Queenstown Lakes District Council District Plan, the Building Act and any other relevant statutory documents.

1.2 Context

Millbrook Country Club Limited is the registered Encumbrancee in the Encumbrance Instrument as registered (or to be registered) on each of the Millbrook titles, and as referenced in each individual sale & purchase agreement. As such Millbrook is required to approve plans and specifications for owners of Millbrook properties. These Design Guidelines have been created as a framework for Millbrook's discretion and approval decisions to be made from.

Millbrook has the authority under the Encumbrance Instrument and these guidelines to approve and decline applications in accordance with the design guidelines. Millbrook has engaged and will maintain the services of a Design Review Panel (DRP) made up of external professionals and Millbrook management to consider and process lot owner's applications submitted to Millbrook.

1.3 Master Plan & Philosophy

The character of Millbrook is strongly based on the history of the area, where the architecture and the landscape express the rural tranquillity of the site and hold a strong connection to the traditional vernacular architecture of Arrowtown and Central Otago. The new western development seeks to continue that standard by promoting a set of design controls that is unified but still diverse and to create architecture and landscapes that celebrate and enrich the ongoing history of this region. Integral to this concept is to create a complimentary architectural and landscaping design around a common theme. In doing so Millbrook acknowledges the importance of the site and the structures within the site and the necessity of maintaining a continuity of design and appearance.

That theme includes the following:

- Small scale buildings with steep pitched roofs, reminiscent of the historic rural connections of the site, with thick walls, either plastered or clad in local stone, in repeating tones of recessive colours; deep recesses to vertically proportioned window and door openings, traditional square profiled chimneys, timber clad annexures which break up the mass of the forms and a consistent patterning of window proportions, all of which leave an impression of an architecture that blends into the surroundings
- A local landscape response, typical of a rural homestead amenity, with a consistency in tree planting, rock walling, garden colour, wall and paving elements producing an amenity and character that continues the Millbrook landscape tradition.
- A relationship with the golf course that celebrates the open rolling character of the landscape and produces a residential/ golf course interface that is uncluttered and consistent in appearance, avoiding an 'urban' appearance.

The intent of the Design Guidelines, however, is to develop a homogeneous neighbourhood. The DRP will encourage buildings that are design responses to the same set of prevailing regional and local conditions, the climatic, cultural and physical determinants that dictate eventual architectural style.

1.4 The Site

The western extension of Millbrook includes the land to the west of the existing Millbrook 'Village' area and includes the new Coronet Nine golf holes and land extending to the western boundary of Millbrook. The land is characterised by:

- Mill Creek running from west to east, defining the lowest point of the landscape.
- A largely open landscape, without the established woodland and avenue character that typifies the eastern half of Millbrook.
- Open views to the Wakatipu basin, with largely north facing dwelling sites overlooking the course and the dramatic landscape of the Wakatipu basin.

1.5 The Masterplan

The masterplan for the site responds to the landform, with dwellings overlooking the extended golf course and located on landform that presents exceptional opportunities for views and a rural experience.

Access to the site has been extended to a new entry, west of the existing service entry on Malaghans Road, allowing for ease of access from the Queenstown approach, and providing a discrete entry alternative. A comprehensive network of roading and cart access is designed to minimise roading yet allow practical access to the full amenities of Millbrook and all facilities.

Open fields and golf course is maintained on the lower central and eastern areas, ensuring that all dwellings enjoy a vista of scale and rural amenity.

1.6 Objectives & Design Outcomes

The principle objective behind the design controls is to maintain a consistency of architecture and landscape that upholds property values and the living environment.

The protection of site and landscape are seen as critical to the ongoing success of Millbrook Resort. The original Millbrook

philosophy used the existing natural features such as Mill Creek, the undulating landscape, the mature trees and the historic farm buildings to form the character of the resort. The Millbrook West land seeks the same outcome, utilising existing landform to maintain the resort character.

The controls listed in this document are seen as important measures in protecting the amenity of Millbrook and therefore the investment made by Millbrook Resort and by its members. Within these guidelines excellence in architectural design is encouraged. All residential design must follow these Design Guidelines and exotic forms, colours and finishes are not acceptable.

Whilst a variety of plans, layouts and configurations are expected to satisfy individual owners particular requirements, any development outside these guidelines will detract from the established and continuing Millbrook style. The following guidelines are intended to encourage owners and architects to design individual buildings that blend in with the neighbouring homes and further enhance the well established character of Millbrook Resort.

The design guidelines are intended to provide guidance and clarity to all persons involved in all development at Millbrook, including the development of communal facilities, new dwellings, roading, services, landscape works and any alterations that may arise to all existing or proposed buildings and associated works.

Within Millbrook's new western development two types of products shall be developed:

Land Only Packages: These lots are defined on the 'Neighbourhood Design Plans' and are presented as lots with defined building platforms. All dwellings, except for external hard landscaping features such as pergolas, gazebos, courtyards, must be located entirely within the Building Platform subject to the DRP's discretion under section 2.2.1 herein. Construction of dwellings on these lots is

subject to design and landscape controls. Building platforms have been carefully designed to maximise views, privacy and sunlight. Landscape controls shall ensure that privacy and outlook are maintained between lots.

The overall consideration for the development is to ensure that each house focuses on the home's relationship with special features within the golf course design, and in turn with the natural environment. Generously sized building platforms will ensure adequate separation between houses and the design guidelines will ensure that the house styles will retain the well-recognised Millbrook architectural brand.

The Building Platforms are sufficiently large to encourage dwellings to spread out and to take advantage of the differing views, and encourage larger dwellings to be broken up into smaller scale interlinking components, enabling the designer to use the dwelling to create interesting outside living areas.

House & Land Packages: These lots are to be presented to purchasers as a package that includes both dwelling and landscape. The layout of these homes has been carefully considered to enjoy the golf course views, to maximise privacy and to provide an overall 'village' amenity. Any alterations to these homes will require approval subject to the design guidelines, in order to maintain an ongoing continuity to the overall residential character.

1.7 Relevant Plans

The following plans are attached to this document in Appendix A and are intended to be read in conjunction with the design guidelines:

- Millbrook Masterplan
- Stage 1 Neighbourhood Design Plan
- Mill Green (Stage 2B) Neighbourhood Design Plan

site development & landscape guidelines

2.1 General Considerations

Millbrook Resort regards planting and landscape as key elements in the overall coordination of the resort character and appearance. It is therefore strongly recommended that a professional Landscape Architect undertake the design of landscape works and that that person is familiar with the guidelines outlined in this document.

To assist with the development of the plan, the landscape architect should be aware of the following:

- A landscape plan is required to be forwarded for approval. This may be appended as part of the site plan or attached as a separate document.
- The landscape plan must show all those elements listed under the Design Approval Process outlined later in this document in section 5.2.
- The primary purpose of the landscape plan is to ensure the following design considerations are incorporated into the design.
- Maintaining views in and around Millbrook Resort is an important objective for all residents. Proposed walls, fences and hedges will be considered on the basis of protecting these views and vistas. This applies to all views and in particular the views from the golf course to properties and from adjacent dwellings.

- The location of all landscape works within the private areas is shown on the relevant Neighbourhood Design Plans. All planting undertaken within the areas shown on that Neighbourhood Design Plan shall be as prescribed on the plan. All other planting undertaken on the lots shall be subject to the lists set out in section 2.2.3.

2.2 Site Development & Landscape Guidelines & Controls

2.2.1 Building Platforms

Each of the sites being sold on a 'land only' basis has a clearly defined building platform on the 'Neighbourhood Design Plan'. These Building Platforms have been carefully placed so that each dwelling is subtly screened from each other in order to offer a sense of privacy, to ensure that each house focuses on the home's relationship with special features within the golf course design, and in turn with the natural environment.

All dwellings must be located entirely within the Building Platform. The landscape outside the Building Platform where permitted under the Neighbourhood Design Plan, may include structures such as decks, trellises, gazebos, pools, outdoor fires, garden sculptures, water features, follies and playground equipment. These elements are to be designed to appear as an extension of buildings or building components. These structures shall be subject to the Architectural colour and material guidelines and shall be screened from neighbour and golf course views where it is considered that the appearance may compromise the character of the surrounding

neighbourhood. The location, scale and appearance of these structures shall be shown on the Landscape Plan and shall be subject to approval from the DRP.

Should a homeowner wish to alter the position of their building platform or have some part of the building protrude outside of the designated area, the DRP may consider giving a dispensation, provided that neighbours' privacy or outlook is not compromised.

2.2.2 Fencing & Gates

Objective: To avoid a suburban response to marking territories and lot boundaries in particular along or near fairway or reserve frontages and to achieve a blurred and seamless integration of common to private property boundaries.

Controls:

- Fences are generally not permitted except at the DRP's discretion where owners wish to fence off, for example utility areas, or to contain pets or a pool.
- Fences must be designed as courtyard walls as an extension of the house.
- All fences if required and at the discretion of the DRP are to be contained within the building platform and/or located within the zones shown on the Neighbourhood Design Plan as '*no planting over 3m*' and/or '*unrestricted planting and approved landscape structures*'.
- Gates if required are at the discretion of the DRP and are to be built in timber and/or steel, no greater than 1.8m in height for pedestrian gates. Vehicle gates are not permitted.
- Fences if required and at the discretion of the DRP are to be no higher than 1.8m in height, and if doubling as a retaining wall shall be measured from the lower side of such fence/wall.
- Where a permitted fence is located on a road, reserve or unsold lot boundary then the Fencing Act 1978 will not apply and Millbrook will not be required to contribute to any such boundary fence construction or maintenance costs.

2.2.3 Landscape Planting

Objective: The objective of the landscape planting controls is to create a consistent approach to planting that avoids an urban 'peppercorn' planting pattern and instead produces a contiguous scale of planting more in line with that expected of a large rural homestead. Generally the controls encourage the use of species that are tolerant of the local climate, exhibit good seasonal colour and already form part of the established Millbrook palette.

Controls: Preferred plant species to be used within private landscaping areas are as follows:

Trees

| Plant Code | Botanical Name | Common Name |
|------------|-------------------------|------------------|
| Ace.spp | Acer species | Maple |
| Aln.spp | Alnus species | Alder |
| Ari.ser | Aristotelia serrata | Wineberry |
| Bet.pen | Betula pendula | Silver Birch |
| Cor.aus | Cordyline australis | Cabbage Tree |
| Cot.spp | Cotinus species | Smoke Bush |
| Cor.spp | Cornus species | Dogwood |
| Fra.spp | Fraxinus species | Ash |
| Fru.spp | Fruit Trees (orchard) | |
| Fuc.spp | Fuchsia species | Fuchsia |
| Gin.bil | Ginkgo biloba | Ginkgo |
| Gle.spp | Gleditsia species | Gleditsia |
| Hoh.spp | Hoheria species | Lacebark |
| Lep.spp | Leptospermum species | Manuka, Tea tree |
| Lir.tul | Liriodendron tulipifera | Tulip Tree |
| Mag.spp | Magnolia species | Magnolia |
| Not.spp | Nothofagus species | Native Beech |
| Pla.spp | Plagianthus species | Ribbonwood |
| Pru.spp | Prunus species | Flowering Cherry |
| Pyr.sal | Pyrus salicifolia | Silver Pear |
| Que.spp | Quercus species | Oak |
| Sch.mol | Schinus molle | Pepper Tree |
| Sor.spp | Sorbus species | Rowan |

Shrubs, Grasses, Groundcovers

| Plant Code | Botanical Name | Common Name | |
|------------|-----------------------|------------------------|---|
| Poly.spp | Polystichum | Vestitum Fern | ✓ |
| Ast.spp | Astelia species | Astelia | |
| Aza.spp | Azalea species | Azalea | |
| Ble.spp | Blechnum species | Fern | ✓ |

| Ros.spp | Rosa species | Rose | |
| Teu.spp | Teucrium species | Germander | |
| Vib.spp | Viburnum species | Viburnum | |

✓ Grasses to be used in restricted 'grasses and tussock planting' zone only.

Note: The above list is not final. Other species may be included subject to DRP approval.

Prohibited Species: The following plant types are not to be used on individual lots at Millbrook: Douglas Fur, European Larch, Sycamore, Hawthorne and Silver Birch (the later on Lot 9 Mill Green only).

In general the use of conifer and variegated evergreen species is not encouraged and is not considered to be an appropriate part of the Millbrook character. Native planting, using New Zealand natives endemic to the Wakatipu basin, is encouraged.

Preferred hedge species are Buxus, Laurel, Lonicera, or Viburnum on hedging boundaries or feature. Clipped hedging is encouraged as a means of demarcating private areas and spaces (please note however that hedges are not permitted in the zone marked '*grasses and tussock planting only*' on the Neighbourhood Design Plan).

2.2.4 Irrigation

The installation of reticulated and electronically controlled irrigation systems is strongly encouraged and is compulsory where Millbrook's landscape department is or will be engaged for landscape maintenance of an individual owners property. Efficiency in irrigation systems is encouraged to avoid water wastage.

2.2.5 Retaining Walls

All retaining walls that are visible from off site and outside the building platform are to be built of approved Millbrook laid schist stone or schist rocks, stacked in traditional approved horizontal patterns, reinforced and/or backed with concrete where required.

2.2.6 Mounding & Landforms

All mounding is at the discretion of the DRP and owners are encouraged to use planting for screening purposes as an alternative. All mounding and landforms contained within the lot are to be of a natural shape and contour and avoiding a "flat top". Where approved private mounding meets common area mounding, landform shall be seamlessly integrated. Mounding in the zones

noted on the Neighbourhood Design Plan as '*grasses and tussock planting only*' will be permitted only at the discretion of the DRP.

2.2.7 Access Driveways & Parking

The vehicle crossings throughout the development have been designed so that the entries into the sites are as discreet as possible. Deviation from the road crossing positions as shown on the Neighbourhood Design Plan is at the discretion of the DRP.

Parking on streets or access ways is not permitted except in designated and formed visitor carparking areas. Visitors parking and parking forecourts must be contained within the site. Driveway and forecourt designs must allow for on site turning where lots are accessed from thoroughfare roads.

Millbrook shall provide sealing to lot boundaries. Lot owners are required to use asphalt on their driveways. Lot owners are encouraged to use asphalt in forecourts or dark coloured natural materials at the discretion of the DRP (schist flagstones, exposed aggregate or local gravels are acceptable).

Specific indoor parking and charging areas for a golf cart(s) is a prerequisite to approval for members to own and store a cart on their property.

A minimum of two car garaging is to be provided. Oversized garage areas for storage are encouraged.

2.2.8 Paving & Drainage

A wide range of paving materials is acceptable for courtyard paving that is in keeping with the overall landscape objectives. Courtyard paving materials shall be restricted however to shades of mid to dark grey 'natural materials, such as schist paving, asphalt, exposed aggregate, granites, bluestone or similar. No coloured concrete paving in colours other than the range described above shall be permitted other than creamy colours approved at the discretion of the DRP.

Storm water shall be contained within each site to the degree possible to avoid excessive run off onto neighbouring properties and common areas. Mud tanks or other forms of sediment catchment shall be used where appropriate and reasonably required.

2.2.9 Sculptures & Garden Art

All garden art and sculptures are at the discretion of the DRP. The DRP shall take into consideration the appropriateness of their size, finish, form and colour within the Millbrook setting. All such sculptures or artworks shall be kept clear of the zones designated for '*grasses and tussock planting only*' (fairway side) on the Neighbourhood Design Plans except where permitted by the DRP.

2.2.10 Swimming & Spa Pools

Swimming pools and spa pools are permitted at the discretion of the DRP. Pools must be located within the building platform or in the landscape area where landscape structures are permitted. The design of the dwelling must make consideration for the pool plant to be housed inside the house or garage and be acoustically insulated. Pool fencing must comply with the general fencing objectives and controls within these guidelines. Retractable and lockable covers in lieu of fencing will only be permitted where the DRP is comfortable that neighbouring dwellings are suitably separated from the pool area and that the risk of children straying to the pool is minimal. The owner must also obtain all necessary permits from the local authority as they relate to the Swimming Pool Act.

2.2.11 Exterior Lighting

Exterior lighting is permitted but shall be restricted to down lighting and for the purpose of lighting private areas. Up lighting into vegetation will be permitted provided the total illumination is not excessive and restricted to the relevant lot. Sources are to be incandescent, halogen or other "white light", not sodium vapour or other coloured light, except for temporary holiday decorations.

2.2.12 Site Utilities & Exterior Service Areas

Meter boxes for electricity and gas are to be flush mounted into walls with suitable covers over having regard to the surrounding cladding and hidden as much as possible from off site views, whilst still being accessible for reading.

All service and utility areas such as diesel tanks, storage depots, wheelie bin stores, clothes lines, play equipment and kennels are to be screened from view from any access lot, part of the golf course or reserve areas, and if not located within the building platform may be located within the zones shown on the Neighbourhood Design Plan as '*no planting over 3m*' and/or '*unrestricted planting and approved landscape structures*'.

All utilities on site including gas supply, electrical supply, storm water piping, foul sewer and telecommunications, shall be underground or contained within the buildings structure.

2.2.13 Street Numbers & Mailboxes

Street Numbers shall be shown on flat black steel 200 x 150mm, with numbers in white or such other generic design developed by Millbrook.

Millbrook will have available for Millbrook West lot owners a limited number of mailboxes at it's new western entrance. The allocation of these will be at Millbrook's discretion but generally limited to more permanent residents.

Mailboxes on individual lots are at the discretion of the DRP and must be designed to be integral to a wall or landscape structure so that a mail slot is the only part of the mailbox showing. Proprietary boxes mounted on a post will not be permitted. Please note NZ Post do not currently deliver into the resort but will deliver to the new western entrance.

architectural design guidelines

3.1 General Design Considerations

The intent of these architectural guidelines is to encourage a diversity of design solutions and at the same time produce a unified and harmonious continuity that reflects:

- The rural character and setting of Millbrook
- Respect for the landscape and landforms
- Privacy between dwellings
- Local climate
- Continuity with the characteristics, forms and materials of the established Central Otago and 'Millbrook' styles of architecture

Many examples of buildings that incorporate elements of the design can be found in the Central Otago region including the historic buildings within Millbrook. Millbrook's new western development will now extend this architectural history into a new setting for contemporary ways of life, offering contemporary responses to the same set of prevailing regional and local conditions, the climatic, cultural and physical.

It is a requirement that an Approved Architect (see section 5.2 for the approval process) be retained by each lot owner to prepare plans for submission to the DRP in accordance with the review process.

A picture tells a thousand words and the DRP have selected the following images to help illustrate features of the Millbrook style of architecture.

Traditional square in profile chimney's

Deep window reveals to masonry structures

Vertical window proportions

Single cladding to walls

Eave less pavilions

Stone patterns stacked horizontally

Balconies with traditional balustrades

Single cladding to each pavilion

3.2 Building Mass

Objective: To ensure a consistency in scale and form is achieved, as envisaged in the Master Plan and to bring design unity to each neighbourhood. To acknowledge that each lot forms part of a neighbourhood and to ensure that individual houses are not designed in isolation to their relationship to other surrounding houses.

Controls:

- Buildings are to be contained within the building platforms as prescribed in the Neighbourhood Design Plan and as described in section 2.2.1
- The minimum house size including garages will be 250m²
- The maximum site coverage will be 30%
- Adequate consideration must be given to breaking the mass of building forms in excess of 16m in length, by way of example, gable end projections, chimney's, balconies, pergola's, stepping in or out etc.
- Care will be taken to keep gable ends in the traditional Millbrook proportion (height to width) with any adjacent lean-to or flat roof connections set back from the gable end
- The garage design must be of a similar design and materials as the main dwelling. Garages that do not directly face the road are encouraged.

3.3 Building Height

Objective: To minimise the visual impact of the dwellings, to ensure that they are subordinate to, and blend in with the surrounding landscape. Building heights have been limited in strategic areas to allow improved views from all properties.

Controls:

- The maximum building height of each dwelling will be as per the table shown on each relevant Neighbourhood Design Plan and measured from the noted finished floor level (FFL) or such other FFL as finally determined by Millbrook at the completion of the subdivision works. Basements are permitted but must be below the nominated FFL. Minor breaches of the designated height planes may be permitted at the discretion of the DRP, where the DRP is satisfied that no neighbouring owner is affected and that there are significant other neighbourhood design advantages in allowing such discretion.
- There are other specific height restrictions for garages within the standard 5m set backs with these noted on the relevant Neighbourhood Design Plans.

3.4 Roofs

Objective: To ensure that a unified roofscape in varying tones of grey and with a richness in gable rhythms is achieved.

Controls:

- All buildings will follow a design theme based on the gable roof form of 37.5° in pitch.
- No eaves or overhangs are permitted
- Roof claddings are limited to one finish selected from - Corrugated colour steel in either 'Grey Friars' or 'Sandstone Grey' or alternatively in a traditional natural grey slate (sample to be approved by the DRP).
- The DRP may allow, at their discretion, a second roof finish to a secondary form (i.e. garage) where they are satisfied that the overall design would benefit from this feature, i.e. where the garage has been designed as a separate 'Barn' structure.
- Flat roofs that connect and link pitched roofed pavilions are permitted but shall not exceed 20% of the total roof area. The flat roofs are to generally sit below the gutter line of the pavilions that it is linking and shall be covered in an approved membrane of a colour consistent with the main roof colour.
- Lean-to structures are permitted at the discretion of the DRP and shall have a minimum roof pitch of 15° and a maximum pitch of 37.5°
- Bargeboards and fascia's exceeding 50mm in width are not considered appropriate and if used shall be painted to match the facades.
- All down pipes and gutters are to be in a colour matching the roof. Copper down pipes and gutters are permitted only when used with 'Grey Friars' coloured iron or with a slate roof. PVC downpipes and gutters are not permitted.
- All roof flashing and penetrations shall be in a colour and material consistent with the roof (no PVC is permitted). Penetrations are to be avoided where possible (i.e. vented out walls instead) and if used are to be mitigated by using custom built caps to follow the roof pitch in order to avoid the 'mushroom' effect
- No plant or equipment is permitted to be positioned on the roof except for TV aerials and sky dishes, which are to be screened to the maximum intent possible.
- Solar panels are permitted at the discretion of the DRP. They must be designed and integrated into the structure to be as flush and unobtrusive as possible, in colours that match the roof, and on a roof slope(s) that has minimal views and glare from neighbouring properties and common areas.
- Dormers are permitted but must have 37.5° pitched roofs and shall be in keeping with traditional dormer formats as used at the resort. Narrow dormers (max 1m) with flat roofs may be permitted at the discretion of the DRP and must be capped with a sheet metal to match the main roof. Both flat topped and pitched dormers shall not be permitted on the same dwelling.
- Pitched roof forms must be gabled, no hip type roofs are permitted. No parapet gable end walls are permitted.
- Where skylights are contemplated the architect shall ensure that the flashing kits do not protrude above the roof plane unnecessarily.

3.5 External Wall Materials

Objective: To ensure that dwellings complement the surroundings and landscape and help to blend the buildings and the new improvements with the site. Materials should be natural or in recessive colours with a limited number and variation in finishes.

Controls:

- All external above ground cladding materials shall be limited to Millbrook quarry stone laid horizontally (pattern and finish to be approved by the DRP prior to work commencing), painted

plaster rendered with a stone like appearance or wood float finish (other patterned plaster finishes are not acceptable), horizontal dressed timber weatherboards painted/stained in an approved colour, and cedar vertical board and batten (dimensions to be approved by DRP).

- Vertical board and batten finishes are only permitted to secondary architectural forms and on the "street side" of the lot, and finished in natural approved stains.
- Weatherboards shall be dressed and bevel backed or rusticated in 150mm to 200mm and shall be either painted, in natural unfinished cedar or in cedar with an approved stain finish. Stained or natural cedar weatherboard finishes are only permitted to secondary architectural forms and on the "street side" of the lot.
- Individual pavillions shall be clad in a single cladding i.e. no changes of materials on different walls of a pavillion.
- Claddings are not to be mixed on any wall i.e. one cladding low down and another in the upper triangle of a gable end
- Exterior paint colours shall be one of the following Resene colours, or a colour within the same earthy tones as approved by the DRP. Other good quality brands paints shall be permitted by the DRP (that match the Resene colours). No trim or highlight colours are permitted.
- Exterior timber stains shall be limited to those with a natural colour finish, which must be approved by the DRP prior to application (a sample must be submitted to the DRP).

|------------------|---------------------|
| ▶ Pravada | ▶ Pavlova |
| ▶ Stonewall | ▶ Akaroa |
| ▶ Half Stonewall | ▶ Bison Hide |
| ▶ Arrowtown | ▶ Double Bison Hide |
| ▶ Half Arrowtown | ▶ Quarter Mondo |
| ▶ Napa | ▶ Half Mondo |

3.6 Doors & Windows

Objective: To ensure that a traditional approach to window sizes and details is maintained whereby smaller windows of vertical proportions were punched into gable ends and side walls with deep reveals

Controls:

- Joinery finishes permitted in natural or stained cedar, painted timber, steel, powder coated aluminium or anodised aluminium. All colours to be in keeping with the other exterior finishes and to be approved by the DRP.
- The shape, proportions and details of all openings are to be appropriate to the structural expression of the walls within which they are located. Windows shall be vertical in proportion, with oversized glass areas permitted only at the discretion of the DRP and where approved broken up with mullions and transoms to the approval of the DRP.
- All windows to be double-glazed. Windows in line with the golf course should be in toughened glass.
- Only clear glass permitted except where bathroom windows are required to be in opaque or frosted glass. Non-reflective glass to be used where large expanses of glass face onto any fairway or where required by QLDC. No tinted glass is permitted.
- Where windows in a pavillion form are not part of a door set they are encouraged to be raised off the floor level by a minimum of 400mm
- Care should be taken with the positioning of windows to minimise privacy issues and 'overlooking'.
- Curtain glass walling to gable ends is only permitted at the discretion of the DRP and shall be limited to one pavillion per dwelling and where that pavillion has a height of no greater than 6.5m and the glass expanse is broken up horizontally and vertically to the approval of the DRP with mullions/transoms. No half glass / half solid walls shall be permitted (i.e. glass to the upper triangle and solid to the lower portion of the gable end).
- All windows set into masonry, plastered or stone walls are to be recessed to the degree possible but to a minimum of 200mm. Windows set in timber clad walls shall be either recessed or 'plant on' timber window facings used.
- Garage doors shall be timber and in either paint or cedar finished to complement the dwelling colour scheme.

3.7 Building Projections

Porches, verandas, pergolas, loggias, outdoor fires, and patios for climate control and/or outdoor living and circulation are encouraged. All of these building projections should be designed as integral elements of the building forms.

Controls:

- All roof projections including chimneys, flues and vents shall be compatible in height and material with the structure from which they project. Chimneys, where they are deemed to be a strong design feature, may exceed the height control by up to maximum of 2m.
- Chimneys are to be square in profile except at the breast where a variety of traditional treatments can be used that are appropriate to Millbrook. Protruding flues are to be capped and or screened with powder coated steel frame to match the chimney proportion
- All structures on any one site are to be designed as integral parts or extensions of the main building in terms of materials and colours, even if physically separated from it.
- Pergolas are to be of a scale and proportion to suit the house. Heavy timbers such as bridge beams are generally not acceptable.
- Balconies and bay windows are permitted. Balconies are to be of a traditional format with traditional vertical balustrading (glass balustrading is not permitted) and posts.

3.8 Other Controls

- Open fires or log burners within dwellings are not permitted (other than Millbrook approved gas appliances)
- With respect to outdoor fires, open fires shall be permitted at the discretion of the DRP and subject to any relevant local authority rules or by-laws.
- Air-conditioning units are only permitted if they are designed as an integral part of the building and screened acoustically and visually to the satisfaction of the DRP.
- No pile type foundation construction is permitted

general guidelines & controls

4.1 Overview & Memorandum of Encumbrance

A memorandum of encumbrance is or is to be registered against all Lots within Millbrook. The memorandum of encumbrance contains formal land use controls, which must be adhered to as well as the land use, and site management controls contained in clause 4.2 and 4.3. The relationship between the design guidelines and the memorandum of encumbrance is complimentary. Where a control or guideline is more restrictive in either the design guidelines or the encumbrance the interpretation of such provision shall not be feted or restricted by the wording of the other.

4.2 Land Use Controls

- a)** No site works, building work or landscaping work on any lot shall commence without first obtaining the written approval of the DRP to the plans and specifications for the intended residential dwelling, any other buildings and landscaping.
- b)** Any future additions or external decoration (including re-painting) or alterations to dwellings or substantial landscaping or any other permitted building on the lot must also be approved by the DRP prior to commencing any work.
- c)** Site owners must also obtain all necessary Land Use Consents and Building Consents from QLDC before commencement of any work on site.
- d)** Residences may not be occupied until a code of compliance certificate is issued in accordance with Building Act 2004

requirements. Millbrook may request a copy of such certificate as proof of issue.

- e)** Construction of residences including any fencing must be completed within five (5) years of the initial title issue date of each new lot. Landscaping is to be completed within three (3) months of completion of the residence. Construction of the residence must be continuous and once started must be completed within twelve (12) months of breaking ground.
- f)** No second hand or relocatable buildings may be brought onto the property
- g)** Boats, trailers, caravans, additional cars may not be parked on the property unless garaged.
- h)** No commercial use of a property is permitted other than a home office.
- i)** The land will not be further subdivided. l) A single residential dwelling only may be erected on the property except that the following (subject to any Resource Consent/Consent Notice) may be attached or detached from the main dwelling but within the building platform:
 - (a) a guest house up to a maximum of 60m² or
 - (b) Caretaker Unit that shall not exceed 100m² or
 - (c) an additional fully equipped living unit for senior or handicapped residents that shall not exceed 100m². An additional enclosed parking space shall be provided for any of those additional uses described in this sub-clause. It should also be noted that the lot owner is responsible for any additional headwork's or development contributions payable to QLDC (if any) for any of these additional uses.

4.3 Site Management Controls

During construction of their Millbrook home it will be the responsibility of the lot owner to ensure builders, subcontractors, workmen and suppliers comply with these design guidelines and minimise disturbance to other Members and residents.

- a)** A pre-construction conference between the DRP convenor and the lot owner's contractor is required to discuss the contractors work plan, establish the location of services, site buildings, delivery routes and these site management controls etc.

- b)** Prior to commencing, and in order that Millbrook has surety that damage (that may/occur to any of Millbrook's property/land during construction) will be rectified satisfactorily and in a timely manner, the owner shall deposit with Millbrook an amount of monies that Millbrook deem to be suitable, based on the location and size of construction to be undertaken, but not less than \$5,000. This will be set against any damage to services, roadways and landscape areas. Any unexpended sum will be returned to the lot owner at practical completion. Should damage in excess of this amount be incurred then Millbrook reserves the right to recover such additional sums from the site owner. Road crossing bonds are not payable to QLDC for houses within Millbrook.

- c)** Access to construction areas must be via the new western entrance. Contractors and owners shall ensure where possible, that smaller delivery trucks are used. Where deliveries are made by larger semis or B-trains, that require greater turning distances than are available within the residential areas, then contractors shall arrange for goods to be first de-cantered onto smaller trucks and then delivered to site. The lot owner's contractor will immediately repair any damage caused by oversized trucks inappropriately brought onto the site, or if repaired by Millbrook, the costs recovered from the construction bond and/or site owner.

- d)** All trade vehicles are to be parked on the lot or in such other position as agreed by Millbrook or agreed by a neighbouring lot owner. Trade vehicles are not to be parked on the roads or on the grass swales or reserve areas

- e)** Temporary buildings associated with construction are permitted but must be in a tidy condition and located on the lot.

- f)** The dwelling will be constructed on site. No kitset, pre-built transportable or relocatable house, caravan, shed or garage may be erected or permitted for permanent or temporary accommodation

- g)** Only one construction sign is permitted on site – no larger than 900x600mm. The sign must be fixed and is permitted only within the lot boundaries.

h) Hours of work on site are restricted to: 1st November to 31st March 8am to 8pm Monday to Saturday and 1st April to 31st October 8am to 5.30pm Monday to Saturday, however under no circumstances should there be any construction noise emanating from the site after 5.30pm

i) Noise: All care is to be taken to keep noise levels to a minimum.

Contractors are not permitted to have radios or music playing on site.

j) Health & Safety: Owners shall ensure that all contractors on site have an up to date Health & Safety policy and adhere to site safety standards at all times.

k) All buildings must be constructed in accordance with the current Building Act and Building Code and must be built in a good and tradesmenlike manner. All construction must be carried out by a current member of the Master Builders Association or such other contractor as approved by Millbrook.

l) During construction:

(i) No building material or waste may be placed on any adjoining lot, community area or any part of the Millbrook Resort

(ii) The Building Contractor must carry full contract insurance and public liability cover for an amount deemed adequate by the DRP.

(iii) The DRP reserves the right to enter on to any building site for the purpose of inspecting the building to ensure that design and building standards and site maintenance requirements are observed.

m) No builder's waste or rubbish may be allowed to accumulate on the property. A refuse skip must be used during construction. Wind blown material is to be promptly retrieved.

n) All building materials and equipment brought onto the property during construction must be contained within the perimeter of the section.

o) Contractors and sub-contractors are not permitted to have dogs or pets on site

p) Contractors or sub-contractors are not permitted to have rubbish fires on site without first obtaining the approval of the DRP convenor.

q) Grass and other groundcover on the lot will be maintained so as not to exceed 100 mm in height. Millbrook may enter the property and cut grass and groundcover at the cost of the owner if this site maintenance requirement is not observed or remedied upon request.

4.4 Codes of Practice

- a) All dwelling plans, exterior finishes and landscape works are to be approved by Millbrook as per the process outlined in section 5.2.
- b) The DRP has the right to enforce all protective covenants, design guidelines and codes of practice applying to the property from time to time and if the breach is of a serious nature or is not rectified promptly then Millbrook reserves its rights to enforce the rent charge provisions of the Memorandum of Encumbrance.
- c) The DRP reserves the right to make reasonable changes to these design guidelines and to determine the placing of adjacent buildings and codes of practice from time to time as the DRP considers practical and necessary without unreasonably interfering with the integrity of the overall objectives of the Millbrook Design Guidelines. Where a neighbour's property may be affected by any proposed decision, the DRP will consult with the neighbour so affected but the DRP's decision will be final.
- d) In applying these covenants the DRP shall act in the best interests of Millbrook and the owners at all times. All decisions shall be made to ensure high design and building standards.
- e) In the event of resale of the property the owner must make these guidelines known to the purchaser to ensure the purchaser understands these requirements and that no misunderstandings arise which could involve the owner, the DRP or any other party in legal proceedings.
- f) In exercising its rights under these guidelines Millbrook shall act reasonably in all respects.

4.5 Architect Approval

Each Architect appointed by a lot owner must first complete an induction process and commit to the Millbrook Design Protocol Agreement using the form attached in Appendix B.

Millbrook reserves the right to reject any architect who does not agree to be bound by, or who has breached the Millbrook Design Protocol Agreement in the past.

design review

5.1 Design Review Panel Organisation

5.1.1 Design Review Panel Membership

The DRP will consist of 3 to 4 members namely an Architect, a Landscape Architect and one to two Millbrook development representatives. If and when an Owners Association is formed then a representative of that group may be added by agreement between Millbrook and the Association. Each person will hold office until such time as he/she has resigned, or has been removed, or his/her successor has been appointed.

5.1.2 DRP Convenor

The DRP Convenor is responsible for the design review process and administration and shall have the authority to agree more minor queries or submissions that comply with the design guidelines without calling for a full meeting.

5.1.3 Appointment of Members

Millbrook will appoint the DRP members. Millbrook will also have the power to remove and replace DRP members. At such time as Millbrook as Developer no longer owns any of the lots within the Development and after all the lots have been fully developed, and all dwellings have been completed, the power of appointment

and removal in respect of membership of the DRP may, at Millbrook's discretion, be handed to the Home Owners Association or Residents Association if such exists.

5.1.4 Resignation of Members

Any member of the DRP may at any time resign from the DRP upon written notice stating the effective date of the member's resignation to the DRP. Millbrook will thereafter appoint new members to the DRP.

5.1.5 Functions of the DRP

It shall be the duty of the DRP to consider and act upon such proposals or plans from time to time submitted to it in accordance with the design review procedures established by these Design Guidelines; to amend the Design Guidelines as deemed necessary; and to perform any duties assigned to it by Millbrook.

5.1.6 Right of Waiver

The DRP recognizes that each lot has its own characteristics and that each Owner has their own individual needs and desires. For this reason the DRP has the authority to approve deviations from any of the Design Guidelines or Regulations contained within this document. It should be understood, however, that any request to deviate from these Design Guidelines will be evaluated at the sole discretion of the DRP, and that the approval of the deviations will be limited to only the most creative design solutions to unique situations. Prior to the DRP approving any deviation from a Design Guideline, it must be demonstrated that the proposal is consistent with the overall vision of the development, the objectives of the Design Guidelines, and will not adversely affect adjoining lots or the Development as a whole.

The DRP also reserves the right to waive any of the procedural steps outlined in this Design Guideline document provided that the Owner demonstrates there is good cause.

5.1.7 Non-liability

Provided that DRP members act in good faith and with due diligence, neither the DRP nor any member shall be liable to Millbrook or any Owner or any other person for any damage, loss or prejudice suffered or claimed on account of:

1. Approving or disapproving any plans, specifications and other materials, whether or not defective.
2. Constructing or performing any work, whether or not pursuant to approved plans, specifications and other materials.
3. The development or manner of development of any land within the development.
4. Executing or recording a form of approval or disapproval, whether or not facts stated therein are correct.
5. Performing any other function pursuant to the provisions of the Design Guidelines.

5.2 Design Review Process

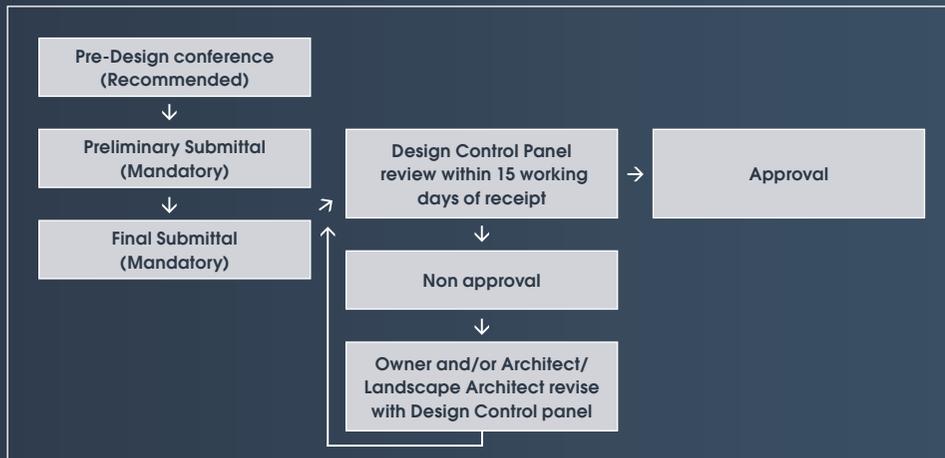

Drawings of the site development and dwelling will be carefully reviewed by the DRP to ensure that the proposed design is compatible with the overall development as a whole, is responsive to the particular site, and is in compliance with the "resource consent(s)" issued to Millbrook by QLDC for the development in general and complies with the Design Guidelines. This design review process must be followed for any of the following improvements:

- Construction of all new buildings;
- The renovation, expansion or refinishing of the exterior of any existing building;
- Major site and /or landscape improvements; and
- Construction of, or additions to fencing or enclosure structures

The DRP evaluates all development proposals on the basis of the Design Guidelines. Most of the guidelines outlined in this document are written in relative terms. The interpretation of these standards is left up to the discretion of the DRP. Other guidelines such as building height, roof and exterior wall materials are more definite, or absolute design parameters.

Any Improvements as described above shall require and be preceded by the submission of plans, and specifications describing the proposed improvements and be accompanied by the noted application fee. The Owner shall retain competent assistance from an Architect, and Landscape Architect. The Owner shall carefully review the Neighbourhood Design Plan, and these Design Guidelines and any other documents pertaining to this development issued from time to time prior to commencing the design process.

Having secured final design approval from the DRP, the Owner is also required to meet all relevant Consents from QLDC. The review process takes place in four steps:

5.2.1 Pre-design Conference (recommended)

Prior to the preparation of any material for formal DRP review it is strongly recommended that the Owner and/or Owners Consultant(s) meet with the DRP convenor for a pre-design conference. The purpose of this meeting will be for the DRP Convenor to answer any questions the Owners and/or Consultant(s) may have and to discuss the particular characteristics and restrictions on the site, its access, the Building Platform, etc and the requirements, fees, and the design review process.

5.2.2 Preliminary Review (Mandatory)

In order to continue the process after the pre-design conference, the Owner or their consultant shall submit a written application accompanied with their Preliminary Design (PD) documents and the appropriate fee. A checklist of what is required to be contained in the PD and an application form will be made available from the DRP convenor. This step is intended to avoid wasted time and professional fees that result from pursuing a design solution that is in conflict with the standards expected from the DRP. Note: for ease of interpretation a scale model or 3D images are required at this stage of the review process.

Upon receipt of these documents, the DRP will liaise with the Owner to schedule a meeting to review the PD documents. The Owner and /or Consultants are encouraged to be present at the meeting. The DRP will review and comment on the application at the meeting, allow time for discussion with the Owner and/ or Consultant(s) if present, and subsequently provide the Owner with the conclusion of the meeting in writing.

A second review meeting may be necessary to review corrected and/or any new submission

5.2.3 Final Submittal (Mandatory)

The final submittal documents are to include.

- a) Landscape/Site Plan (1:100 scale in A3)
 - Sidewalks, stairways, parking, driveways, decks, patios, courtyards, swimming pools, tennis courts, awnings, fences and walls, garages, other accessory buildings
 - Any fencing, location, height, appearance
 - Location of plants, lawn area, trees, ground cover areas and shrubs
 - Plant list including species, size and height at maturity
 - Scale model or 3D renderings

b) Building Plans (1:100 scale in A3)

- Site Plan of works
- Plans, sections, elevations
- Cross Sections
- Roof slope and building height
- Colours and materials identified
- Any rooftop equipment, chimneys, exterior lighting
- Window details

c) Specifications

- Samples and colours of roof, window joinery and wall materials, and of other special features

Upon receipt of these documents, the DRP will liaise with the Owner to schedule a meeting to review the FD documents. The owner and/or consultants are encouraged to be present at the meeting. The DRP shall review and comment on the application at the meeting, allow time for discussion with the Owner and/or Consultant(s) if present, and subsequently provide the Owner with an approval or conclusive recommendations in writing for refinements to the design. A second review meeting may be necessary to review corrected and or new submission.

5.2.4 Observation

During Construction the DRP shall check on the progress to ensure compliance with the approved Final Design. Notwithstanding these procedures, the onus is on the Owner to ensure the construction complies with the Final Design documents. The DRP must not be seen as policemen, but rather as a body, which is acting in the best interest of the development for the benefit of all the Homeowners. If changes or alterations have found not to be approved, the DRP shall issue a Notice to Comply.

5.2.5 Subsequent Changes

Subsequent construction, landscaping or other changes in the intended improvements that differ from approved final design documents must be submitted in writing to the DRP for review and approval prior to making changes.

5.2.6 Notice to Comply

When as a result of a construction observation the DRP finds changes and/or alterations that have not been approved, the DRP will issue a Notice to Comply. The DRP will describe the specific instances of non-compliance and will require the Owner to comply or resolve the discrepancies.

5.2.7 Meeting Frequency and Approval Times

The DRP will make every reasonable effort to comply with this time schedule for the design review process. However the DRP will not be liable for delays that are caused by circumstances beyond their control. The DRP will meet depending on the demand of reviews required. It is expected that during high demand periods that the DRP will meet regularly on a monthly or shorter cycle. Where the demand reduces the DRP will meet on an as needed basis. Notwithstanding the above the DRP's objective is to meet within 15 working days of a submission and respond within 3 working days of a meeting. The DRP convenor will also be available between meetings to offer feedback and/or decisions where he/she can.

5.2.8 Application Fees

- In order to defray the expense of reviewing plans and related data, and to compensate for the cost to monitor the design, a one-off set fee is required. The fee is \$600+GST and is payable prior to, or to be attached with the preliminary submittal. The fee covers the full design review steps as set out in this section. The DRP reserves the right to charge additional fees for those owners, or owners consultants who in the opinion of the DRP require excessive resubmittals.
- The DRP reserves the right to amend these charges in the future and/or to introduce a fee for additions/alterations to dwellings.

5.4 Appendix B Stage 1 Neighbourhood Design Plan

Key

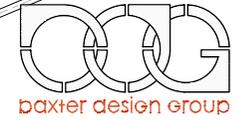

- 5m building height restriction
- 6.5m building height restriction. Windows to be averted from lot 301
- Grasses and tussock planting or other low level <1m high planting permitted at the discretion of the DRB
- No planting over 3m in height
- Unrestricted planting within approved plant list
- Unrestricted planting within approved plant list and approved landscape structures allowed

Notes: buildings on lot 328 - 339 are indicative only

- Bulking platforms
- Lot Boundaries
- Retaining wall
- Bridge
- Water feature
- Golf course fairway

5.6 Appendix D

millbrook design
protocol agreement

Whereas

A. Millbrook is developing the land on the western side of the resort and has developed an overall Master Plan and established design objectives that it seeks individual lot owners appointed Design Consultants to join in with to achieve the unified design it is seeking ("Millbrook Master Plan")

B. Millbrook has developed a set of design guidelines (version 2.0 as at 15 December 2009) ("the Design Guidelines").

C. The Design Consultant has been engaged by('the Client')
to design their dwelling and/or landscape (strike out where appropriate) on lot of the Millbrook development.

.....
Signed for on behalf of.....**(the client)**

This Agreement made this day of 20

Between('the Design Consultant').

And Millbrook Country Club Limited ('Millbrook').

It is agreed

1. The Design Consultant has, or will be, retained by the Client to design the Clients new dwelling and/or landscaping works on the Client's Millbrook lot.

2. The Design Consultant shall immediately notify Millbrook in the event that the Design Consultants engagement is terminated or comes to an end at anytime prior to the completion of the dwelling/landscaping.

3. The Design Consultant acknowledges that they have received, read and understood a copy of the Millbrook Master Plan and the Design Guidelines.

4. The Design Consultant acknowledges Millbrook's Master Plan objectives and undertakes to design the Clients Dwelling and/or landscaping so as to be consistent with the Millbrook Master Plan.

5. The Design Consultant agrees to design the client's dwelling and landscaping in accordance with the Design Guidelines and to follow the approvals procedure set out therein
