## 22.1 Zone Purpose

There are four rural zones in the District. The Rural Zone is the most extensive of these. The Gibbston Valley is recognised as a special character area for viticulture production and the management of this area is provided for in Chapter 23: Gibbston Character Zone. Opportunities for rural living activities are provided for in the Rural-Residential and Rural Lifestyle Zones.

The Rural Residential and Rural Lifestyle zones provide residential living opportunities on the periphery of urban areas and within specific locations amidst the Rural Zone. In both zones a minimum allotment size is necessary to maintain the character and quality of the zones and the open space, rural and natural landscape values of the surrounding Rural Zone.

While development is anticipated in the Rural Residential and Rural Lifestyle zones, the district is subject to natural hazards and, where applicable, it is anticipated that development will recognise and manage the risks of natural hazards at the time of subdivision or the identification of building platforms.

### Rural Residential Zone

The Rural Residential zone generally provides for development at a density of up to one residence every 4000m<sup>2</sup>. Some Rural Residential areas are located within visually sensitive landscapes. Additional provisions apply to development in some areas to enhance landscape values, indigenous vegetation, the quality of living environments within the zone and to manage the visual effects of the anticipated development from outside the zone, particularly from surrounding rural areas, lakes and rivers. The potential adverse effects of buildings are controlled by bulk and location, colour and lighting standards and, where required, design and landscaping controls imposed at the time of subdivision.

### Rural Lifestyle Zone

The Rural Lifestyle zone provides for rural living opportunities with an overall density of one residential unit per two hectares across a subdivision. Building platforms are identified at the time of subdivision to manage the sprawl of buildings, manage adverse effects on landscape values and to manage other identified constraints such as natural hazards and servicing. The potential adverse effects of buildings are controlled by height, colour and lighting standards.

Many of the Rural Lifestyle zones are located within sensitive parts of the district's distinctive landscapes. While residential development is anticipated within these zones, provisions are included to manage the visual prominence of buildings, control residential density and generally discourage commercial activities. Building location is controlled by the identification of building platforms, bulk

and location standards and, where required, design and landscaping controls imposed at the time of subdivision.

## 22.2 Objectives and Policies
