

Policy for the Provision of New Water Supply and Sanitary Sewer Connections

Adopted – Council 26 July 1996

Where any connection is required to any water supply or sanitary sewer pipe under the Council's control and/or when any work associated with making any such connection or extending any water supply or sanitary sewer connection within a public road all such works are to be arranged through the Council's Facilities Maintenance Contractor and are to be carried out at the full cost of the person applying for the connection.

The work must be competitive and at current market rates. Where water or sanitary sewer mains are to be extended to service new subdivisions, subject to the above requirements, the developer shall provide a separate water service connection and a separate sanitary sewer connection to each of the new lots to be created in accordance with the Council's standards for the subdivision and development of land.
